### *'Save Environment, Save Money, Say no to Crackers'*

#### Mathematics

The 'Anti Cracker' activities based on the application of mathematical concepts were conducted for classes III, IV and V during the third week of October 2017. These activities were aimed to create awareness among the students about the harmful effects of burning crackers.

In this activity students estimated the amount of money wasted on crackers and monetary losses incurred in case of fire caused by crackers. They also calculated money that could be saved by saying 'NO' to crackers. Students participated in the activities with a lot of zeal and enthusiasm. They learnt about air pollution caused by the increased levels of suspended particulate matter and the severe health hazards caused by them. The activities helped the students develop a sense of responsibility and to be the ambassadors to spread the message of a cracker free Diwali.
