

REPORT ON SCIENCE DAY

‘The Science of today is the technology of tomorrow’

Science day was held on 24th and 25th July 2018 for classes III, IV and V. Students watched a video and a presentation on ‘Dengue’ followed by a quiz to recapitulate the symptoms, treatment and ways of protecting themselves from the disease.

Oral communication skills are vital for a student’s academic success and future career prospects. Keeping this in mind, various activities were organised for the Science Day wherein students were given a platform to showcase their presentation skills. Students of class III came dressed up as a scientist of their choice and spoke about his/her invention confidently. The medicinal benefits of spices like pepper, cinnamon, clove etc. were discussed in detail by the students of class IV. Students expressed their creativity by the usage of colourful props made by them for the activity. Little engineers of class V described the working of simple machines and their uses with the help of eye-catching props.

Corridors were decorated beautifully with the help of charts depicting the importance of cleanliness and importance of Science in our daily life. Students thoroughly enjoyed participating in the Science Day activities and learnt the various aspects of Science in a fun-filled way.
