REPORT- ASTRONOMY WORKSHOPS (MODULE 3)

When you look at the stars and the galaxy, you feel that you are not just from any particular piece of land, but from the Solar system. –Kalpana Chawla

Class III

The third module of the workshop, ‘The Martian Lab’, was conducted for the students of class III on 20th September 2017. This workshop gave an insight to the students about the possibility of existence of life on Mars. They also learned about rovers that have been to Mars. Students were excited to make their own ‘Curiosity Rover’ with the help of jig saw puzzle.

Class IV

The third module of the workshop, ‘The Magic of Light’, was conducted for the students of class IV on 22nd September 2017. The children were enthusiastic about attending the workshop. They were explained about the concept of light and shadow through an interesting activity – ‘The Magic of Light’. They were explained about transparent, translucent and opaque objects. An activity was conducted to show how different colours are formed by mixing primary colours. A take away gift, “Shoot The Alien” brought happy smiles on their faces.

Class V

The third module of the workshop, ‘Rocket Science is Fun’, was conducted for the students of class V on 22nd September 2017. It was an enriching experience for the children as they gained knowledge about rockets- their various parts, functions and their motion. Students also learnt to construct a rocket. They were thrilled to launch their paper rockets. The workshop was not only educational and entertaining but also inspirational for the young minds.

All the modules were designed to ignite curiosity, impart knowledge about space and have fun while learning.
