

# SEEK EK KHOJ - AN AIL PROJECT

## A REPORT

'Education is not the learning of facts but training of the mind to think.'

Albert Einstein

The challenges posed by the prevailing times have brought to fore the indomitable nature of the human spirit. We have also learnt that possibilities are infinite and together we can make things happen. Creativity blossoms in the midst of necessity and nurtures the urge to explore, create and innovate. This has been proven once again by the young minds of DPS Gurgaon, through their annual event, 'SEEK EK KHOJ - an AIL PROJECT'. This year, the event was held online on 22nd and 23rd January, keeping in mind the prevailing times. Weeks of brainstorming, persistent effort and extensive research culminated in a successful presentation that transcended the boundaries created by various disciplines.

Art facilitates the development of motor skills, language and social skills, decision making and promotes the spirit of invention. Integration of various art forms with all the subjects transforms learning into a joyful experience. This interdisciplinary approach was adopted by the students to understand the cross curricular links among various subjects.

The Director Principal, Ms. Aditi Misra, appreciated the collaborative efforts of students and mentors. The AIL Project included research by students in the areas of agriculture - the backbone of our economy, synthetic fibres and plastics, electricity, magnetism, natural phenomenon, pollution of air and water etc.

The project presentations were a perfect blend of technical prowess and creativity and gave the young explorers of Middle School an opportunity to embark on a journey of discovery, built on the edifice of collaboration.

Parents appreciated the efforts made by the students and mentors, and the project was an enriching experience for everyone.
