

Science Day

“The scientist is not a person who gives the right answers, he’s one who asks the right questions.” — Claude Levi-Strauss

Children have curious minds with multitude of questions, for which they are seeking answers. To encourage the spirit of enquiry and to motivate them to explore, Delhi Public School, Gurgaon, celebrated Science Day for the classes 3, 4 and 5 on 21st, 24th and 26th August 2020.

As we face the unprecedented times of being under a pandemic and the learning of tomorrow is happening today, so our little enthusiasts showcased their ideas innovatively on the digital platform.

A Show and Tell activity was held online for the students of classes III, IV and V which enabled them to display their creativity, enhance their oratory skills and engage in learning by doing.

The theme of the day for class III was ‘Nature Cures’. The students collected information on the healing properties of various medicinal plants like neem, tulsi, aloe vera etc. and presented the information by displaying samples, beautiful props and illustrations.

Students of class IV gathered information on healing properties of commonly used spices and herbs in the kitchen like turmeric, pepper, cumin, cardamom etc. and creatively presented the information through colourful props, illustrations and samples as per the theme ‘Kitchen care’.

‘Prevention is better than cure’ was the theme for the students of class V. Children suggested various ways of preventing a disease through song, poem, enactment and simple narration. They also used beautiful and innovative illustrations and props to explain the concept well.

Students participated in the activities with immense zeal and enthusiasm. This event not only augmented their knowledge in science beyond the concepts taught in class but also gave them opportunity to display a host of other talents.
