

REPORT - DISCOVERY LAB (March - May)

I hear and I forget. I see and I remember. I do and I understand.

- Confucius

Hands-on learning is a part and parcel of high-quality science instructions. Keeping this in mind, various activities were planned for the students of classes VI, VII, and VIII for the months of March, April, and May.

Students of classes VI, VII and VIII were engaged in fun filled and interactive lab activities which included game puzzles, hands on activities, observing specimens through the microscope and studying various 2D models. This helped the students to appreciate the importance of practical application.

In essence, the students took part in various activities actively and helped each other in hands-on activities with great zeal and learned many needed skills like problem-solving, analytical skills, teamwork, etc wherein they paid attention to meticulous details, thus helping them grow as individuals as well.
