

Imagica - Soil Savers (Primary Wing)

The Students of the Primary Wing celebrated the Science Week, **Imagica - Soil Savers**.

The Director Principal, Ms Aditi Misra inaugurated the event and urged each one to be a soil saver.

The students visited the different areas of the exhibition and learnt about different types of soil and how soil is important for plants growth. The event sensitised the students about the urgent need to care for our soil and how the soil has become unhealthy due to soil pollution. They were also made aware of changes we all can adapt to, to help soil retain its nutrients, for growing of healthy plants and for restoring degraded soil through right practices. This would help to restore the earth, build resilience in our eco system and heal the planet we call home.
