Junior School – Math Day

‘Mathematics is not about numbers, equations or computations, it is about understanding.’

The students of classes III, IV and V of Junior School celebrated Math Day on 3rd and 4th February 2023 to gain a deeper insight into mathematical concepts through interesting activities. It helped them to experience the joy of Mathematics by applying it to their day-to-day life and to explore new concepts creatively.

Students showed their creativity in an innovative way by following an inter-disciplinary approach. Colourful wind chimes using various 2-D shapes, cut in a specific pattern were made by the students of Class III. The students of Class IV made symmetrical wall hangings by forming a pattern using paper folding. Beautiful tessellation mats by weaving strips of paper into different patterns was made by the students of Class V.

Students of classes IV and V dressed up according to the profession they would choose when they grow up. They enhanced their oratory skills by speaking on the topic ‘Mathematics in my Profession’. All students utilized their creativity and imagination and made it a fun-filled day by participating actively. Last but not the least, an entertaining movie was shown to evoke students’ interest in Mathematics.

Math day empowered the young mathematicians to explore symmetry of the subject in their lives.
