

Nursery-IMAGICA

The students of class Nursery buzzed with excitement as we celebrated the Science Week – **Imagica- Impossible is Possible**, a week full of magic, discovery, and joyful learning! With the inspiring theme ‘Impossible is Possible’, our little ones explored the wonders of science in fun and simple ways.

Throughout the week, children were engaged in simple and playful science experiments that felt like magic! They watched bubbles grow and float, played with soapy foam that expanded and spilled over, and were fascinated to see arrows mysteriously change direction in water. Each experiment introduced basic science concepts in an age-appropriate and joyful way, showing that even simple materials can lead to amazing discoveries.

To carry the excitement home, students created themed crafts as special takeaways. These creative pieces were not just fun art projects—they were reminders of the scientific magic they experienced during the week.

The Science Week was a celebration of curiosity, discovery, and imagination. It helped our little scientists believe that with creativity and a bit of science, even the impossible can become possible.
