

Nursery- Earth Day

To celebrate Earth Day and promote awareness about nature and healthy living, engaging activities were organized for students of Nursery class, allowing them to connect meaningfully with the environment. The young learners enthusiastically crafted newspaper headbands decorated with dry flowers, showcasing their creativity while embracing sustainability. They then embarked on a nature walk in the school greens, equipped with net bags from science kits to collect dry leaves and twigs, and used magnifying glasses to explore the intricate details of nature, encouraging curiosity and appreciation for their surroundings.

As part of a celebration, the students participated in a seed germination activity called 'Each One, Plant One.' The children planted seeds to observe the growth process first hand, which strengthened their understanding of environmental responsibility. They also brought sprouts in their lunchboxes and enjoyed eating them together, reinforcing the importance of nutritious food and healthy habits. Teachers further enriched the experience by explaining the significance of germination and encouraging the young ones to adopt wholesome food practices, making the event both educational and memorable.
