Junior School- Math Day

‘Pure mathematics is, in its way, the poetry of logical ideas.’

A famous mathematician once said, “Mathematics is the most beautiful and most powerful creation of the human spirit.” Mathematics can be fun and challenging with hands-on application in real life. To celebrate the spirit of mathematical learning, experience the joy of the mathematical sphere and to explore various mathematical concepts creatively, Math Day was celebrated by the students of the Junior Wing on Friday, 21st January 2022.

Students participated wholeheartedly in activities that integrate almost every sphere of life. Students of Class III learned the concept of patterns through an activity of creating colourful and vibrant wind chimes whereas the students of Class IV were taught how to construct vibrant wall hangings using symmetry. Class V students made vivid table mats using the concept of tessellations. Children were able to understand various concepts and enriched their skills in an amazing way.

The Math Day empowered the young mathematicians to enjoy learning Math. The idea behind the celebration was to give an opportunity to the students to enhance their logical and thinking skills. It was a fun-filled and joyful day of learning for the students who exhibited unparalleled excitement and actively participated in all activities.
