E-WASTE MANAGEMENT SESSION JUNIOR SCHOOL

'Don't let E-waste pile up! Recycle for a cleaner world.'

Ecoverva Recycling hosted interactive sessions on e-waste management for the students of classes IV and V on September 3rd and 10th, 2024. The workshops aimed to educate students about the dangers of e-waste, which contains hazardous materials like lead and mercury, and the importance of proper handling and recycling of such waste.

Through engaging videos and presentations, students learned about various types of e-waste, recycling methods, and the benefits of recycling, including resource conservation, pollution reduction, and safe disposal of toxic materials. The sessions also highlighted the value of e-waste as a source of precious metals like gold, silver, platinum, and palladium, which can be recovered through proper recycling.

The students gained valuable insights and were inspired to adopt responsible e-waste management practices, contributing to a safer environment and a more sustainable future.
