

Report-Jal Itihaas programme

Class VIII

The objective of the Jal Itihaas programme was to help students understand water as a necessity for the functioning of all life on Earth. Students realized that even though there is abundance of water, not all of it is potable, and very soon that potable water will also become scarce. To fulfill this objective Jal Itihaas -The Heritage Classroom on water was introduced to students by conducting various sessions related to the use and conservation of water. Activities like making posters, research work on river contamination, interaction with peers and families and documenting their feedback, presentations on water pollution were conducted in these sessions.

These classroom sessions helped students to learn-

- Judicious use of water in their daily lives
- Not to waste water
- Prevention of contamination and pollution of water bodies
- Use of traditional practices of water like rain water harvesting, construction of Baolis.
- About the diversity of India in terms of geography, culture, economic and social-all impacting the access to water.
- Understand the disparity in our society regarding access to water and the steps they can take to make water accessible to all.
